SUMMARY

Software developer in Medellín, studying Software Development at ITM. I build full-stack apps and developer tools: contract work on a client's booking platform, and open-source tools published on PyPI and GitHub. I write acceptance criteria before the code and back every claim with a test or a measurement.

TECHNICAL SKILLS

- **Languages**: Python, TypeScript, JavaScript, SQL, Bash.
- **Backend & Apps**: FastAPI, Node.js, Express, React, Next.js, Astro, Electron.
- **Data**: PostgreSQL, SQLite, Prisma, Drizzle.
- **Spoken languages**: Spanish (native), English (B2).
- **Tooling**: Docker, Linux, Git, GitHub Actions, Vitest, pytest, Claude Code, Model Context Protocol (MCP).

EXPERIENCE

WineSpa | *Full-Stack Developer (Contract)* | (React, TypeScript, Express, PostgreSQL, Prisma, Docker) July 2026 - August 2026

Medellin, Colombia (Remote)

- Fixed, optimized and extended the booking platform of a nail spa: booking by service, date and manicurist, a client portal and an admin panel, with no overlapping appointments in PostgreSQL. 32 PRs merged in 5 weeks.
- Hardened access control for 4 roles (owner, admin, manicurist, client) with JWT, bcrypt and rate limiting, and fixed the 10 findings of a Strix pentest, 2 of them critical.

Synk | *QA Intern* | (WebGL, Chromium, Performance Profiling) September 2026

Remote (United States)

- Profiled a browser-based 3D engine with 61 simultaneous entities, measuring 142.9 FPS on average and a 7.1 ms p95 frame time on Chromium.

OPEN-SOURCE PROJECTS

StackHelx | *Author* | (Python, FastAPI, Starlette, Vanilla JS, MCP) 2026

- Built and published on PyPI a local dev environment orchestrator: one config file and shx up assigns free ports and starts Docker, backend and frontend, with a reverse proxy, a web console and an MCP server for agents.
- Wrote 502 tests that run against real OS sockets without mocks; CI runs them on Linux, macOS and Windows.

OrqueHelx | *Author* | (Python, Hermes Agent, ACP, pytest) Sept. 2026 - Present

- Built a Hermes Agent plugin that lets one model delegate tasks to another on the user's own subscriptions (Claude, Codex, Antigravity, OpenCode); the model picks a route per call and the plugin never switches provider on its own.
- Added a Hermes dashboard tab with measured quota per route and a live subagent tree, plus a pause that holds the conversation until the quota resets. 57 pytest tests against a real Hermes. Latest release: v0.3.0.

LuckHelx | *Author* | (Next.js, Electron, SQLite, DeepSeek API, Vitest) 2026

- Built a local desktop app where an LLM rates each task and the earned XP buys rewards the user defines; no accounts and no cloud backend.
- Stored XP as integer hundredths with atomic, SQL-guarded updates so balances cannot go negative or double-spend, and clamped LLM ratings to 1-200 XP before they touch the balance. 289 Vitest tests passing.

CERTIFICATIONS

- **Cybersecurity**: Fortinet Certified Fundamentals (FCF), NSE 1, NSE 2 **(valid through May 2028)**.
- **AI tooling**: Claude Code 101, AI Fluency: Framework & Foundations **(Anthropic)**.
- **Programming**: Python Essentials 1 & 2 **(Cisco Networking Academy)**.
